

SlimLine Power System

DESCRIPTION:

The patented SlimLine Power System is a versatile power distribution product that delivers energy from the power source to multiple LED components. The thin profile of the power strip fits seamlessly behind standard gondola shelving. At only 3/16" thickness, it can be used in almost any merchandising system. The state-of-the-art power connectors can be positioned to any location along power strip. Each connector contains custom circuitry which provides individual fusing and bipolarity. Additional outputs can be added at any time and connectors are easily relocated with snap-on/off action.

- Fused power connectors ensure the system cannot be overloaded
- Fusing ensures each LED is isolated and cannot impact the rest of the system
- All connectors include bipolarity — allowing installation in any orientation
- Multiple Output connector options including: Single Output, Dual Output, 5V USB Output, and High-Capacity Output
- Custom lengths available in 1" increments to suit any gondola height
- Mount strip with rivets, screws, tape, or attach to wire grid using specially-designed mounting clips
- Mounting holes align with standard pegboard hole spacing to simplify installation
- UL Listed
- 5 Year Warranty

SPECIFICATIONS:

SlimLine Power System	
Number of Conductors	2
Conductor Material	Tinned Copper
Connector Housing	ABS AF312C
UL 94 Flame Rating	V-0
Voltage	5-24VDC
Output Jack	DC 2.1 x 2.5
Maximim Current	7 Amps
UL Listing	E474996
Dimmible	Yes
Warranty	5 Years
